

CLAIMS

- 1 1. A method for integrating run-time metrics into an integrated development
2 environment (IDE), the IDE including a runtime environment and a user interface
3 environment, the method comprising:
4 determining an application component to be monitored in the IDE, the
5 application component having associated information in a component
6 repository of the IDE runtime environment;
7 monitoring the application component in the IDE runtime environment to
8 determine a plurality of metrics associated with the application
9 component;
10 transmitting the plurality of metrics to a data collector of the IDE user
11 interface; and
12 displaying the metrics to a user of the IDE.
